The pyrogenic exotoxins of group A streptococci and staphylococcal AB enterotoxins are a family of structurally related superantigens with similar biol. activity. Two distinct areas have been identified which have a highly conserved amino acid homol. in all of the toxin families. A no. of peptides were constructed from these regions, some of which were concatenated and polymd. to enhance their immunogenicity in animals. Antibodies prepd. against these polymd. peptides were used to serol. identify the majority of the superantigen toxins, block the biol. activities of the superantigens, and protect an exptl. animal model against shock. In addn. certain peptides were able per se to block up to 90% of the proliferative responses induced by the toxins. The peptide also proved protective in a septic shock model in mice. Binding expts. indicate that the peptide binds tightly to the major histocompatibility complex class II mol., thus preventing binding and hence activation of the superantigen. The selective and rapid binding of the peptide to the major histocompatibility complex class II mol. may lead to a novel therapeutic modality in treatment of superantigen-mediated diseases.

OTHER SOURCE(S): MARPAT 132:290233

AB This invention relates to amino acid sequences of peptides useful for providing protection against, or reducing the severity of, toxic shock and septic shock resulting from bacterial infections. More particularly, the invention provides peptides derived from consensus sequences of the family of staphylococcal and streptococcal toxins, and may be polymeric and/or carrier-conjugates thereof. The invention also relates to serum antibodies induced by the peptides and/or carrier-conjugates and their use to prevent, treat, or protect against the toxic effects of most, if not all, of the staphylococcal and streptococcal toxins. Antibodies may be induced by administration of a pharmaceutical compn. and/or vaccine contg. a peptide of the invention. The invention also relates to diagnostic assays and kits to detect the presence of staphylococcal and streptococcal toxins, or antibodies thereto.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Although the foregoing invention has been described in detail for purposes of clarity of understanding, certain modifications may be practiced within the scope of the appended claims. While the above findings apply to an experimental animal model, it should be recognized that the tumor used 5 herein is an excellent model of human cancer. Therapeutic success in the canine model with PACC system (described in a series of patent applications, the latest of which is identified as Ser. No. 331,095), the forerunner of the present invention, was transferred to humans in which objective 10 tumor regressions were obtained in four of the first five consecutive patients treated. Thus, the data given herein for rabbits with carcinoma is expected to be predictive of success when the compositions are applied to humans with spontaneous tumors as well.

In the method of treating cancer in a patient utilizing a single step of administering Staphylococcal enterotoxins or enterotoxin fragments, a tumoricidally effective amount of the enterotoxin or enterotoxin fragment is between 0.5 μ g (enterotoxin) per kg (body weight) and 150 μ g (enterotoxin) 20 per kg (body weight). This tumoricidally effective amount applies to the enterotoxins which are chemically derivatized.

We claim:

- 1. A method of treating a subject having a tumor comprising administering to the subject a tumoricidally effective 25 amount of a toxin selected from the group consisting of a staphylococcal enterotoxin and a streptococcal pyrogenic exotoxin.
- 2. The method of claim 1, wherein the toxin is a staphylococcal enterotoxin.
- 3. The method of claim 2 wherein the staphylococcal enterotoxin is selected from the group consisting of enterotoxin A, B, C, D, E, and F.
- 4. The method of claim 2 wherein the staphylococcal enterotoxin is a biologically active fragment of an enterotoxin.
- 5. The method of claim 2 wherein the staphylococcal enterotoxin has been chemically derivatized to minimize toxicity while retaining tumoricidal activity.

- 6. The method of claim 1 wherein the toxin is administered by intravenous inoculation.
- 7. The method of claim 1 wherein the tumor is a carcinoma.
- 8. A method of treating a patient having a tumor comprising administering to the patient a tumoricidally effective amount of a toxin selected from the group consisting of a staphylococcal enterotoxin and a streptococcal pyrogenic exotoxin.
- 9. The method of claim 8 wherein the toxin is a staphylococcal enterotoxin.
- 10. The method of claim 9 wherein the staphylococcal enterotoxin is selected from the group consisting of enterotoxin A, B, C, D, E, and F.
 - 11. The method of claim 10 wherein the staphylococcal enterotoxin is enterotoxin ${\bf B}.$
 - 12. The method of claim 8 wherein the tumor is a carcinoma.
 - 13. The method of claim 9 wherein the staphylococcal enterotoxin is a biologically active fragment of an enterotoxin.
- 14. The method of claim 9 wherein the staphylococcal enterotoxin has been chemically derivatized to minimize toxicity while retaining tumoricidal activity.
 - 15. The method of claim 9 wherein the chemical derivatization is carboxymethylation.
- 16. The method of claim 15 wherein the carboxymethylated toxin comprises carboxymethylated enterotoxin B.
- 17. The method of claim 11 wherein the enterotoxin B has been purified to remove alpha hemolysin.
- 18. The method of claim 11 wherein the enterotoxin B contains no more than 0.1 microgram endotoxin per milligram enterotoxin B.
- 19. The method of claim 8 wherein the toxin is administered by intravenous inoculation.

What is claimed is:

- 1. A method of treating cancer in a tumor-bearing host, comprising contacting the immune system of said host with tumor cells that are transfected with a nucleic acid encoding a superantigen which is expressed in said transfected cells, thereby inducing a tumoricidal immune response and treating said cancer.
- 2. A method of treating cancer in a tumor-bearing host, comprising contacting the immune system of said host with accessory cells, immunocytes or fibroblasts that are transfected with a nucleic acid encoding a superantigen which is 30 expressed in said transfected cells, thereby inducing a tumoricidal immune response and treating said cancer.
- 3. The method of claim 1 or 2 wherein the superantigen is selected from the group consisting of a Staphylococcal enterotoxin, a Streptococcal pyrogenic exotoxin, toxic shock syndrome toxin, a mycoplasma antigen, a mycobacteria antigen, a minor lymphocyte stimulating antigen, a heat shock protein, a stress peptide, and a derivative thereof.
- 4. The method of claim 1 or 2 wherein the tumor cells, accessory cells, immunocytes or fibroblasts are transfected 40 is a human. in vivo.
- 5. The method of claim 1 or 2 wherein the tumor cells, accessory cells, immunocytes or fibroblasts are transfected in vitro.
- 6. The method of claim 5 wherein the transfected cells are 45 tumor cells.
- 7. The method of claim 1 or 2 wherein the contacting
- (i) incubating the transfected cells ex vivo with an immunocyte population to tumoricidally activate the 50 cells are transfected in vitro. population, and
- (ii) administering the activated population to the tumorbearing host.
- 8. The method of claim 7 wherein the activated immuadministration.
- 9. The method of claim 8 wherein the in vitro culture includes interleukin 2
- 10. The method of claim 7, wherein the immunocyte population being activated comprises T cells.
- 11. The method of claim 1 or 2, wherein the superantigen is expressed on the surface of the transfected cells.
- 12. The method of claim 1 or 2, wherein the transfected cells express MHC class II molecules.
- 13. The method of claim 1 or 2, wherein the contacting 65 comprises administering the transfected cells to the tumorbearing host.

- 14. The method of claim 1 or 2, wherein the host is a human.
- 15. A method of killing tumor cells in a mammal, comprising contacting tumor cells that are transfected with nucleic acid encoding a superantigen or biologically active polypeptide of a superantigen with the immune system of
 - wherein expression of said superantigen or polypeptide by the transfected cells produces a tumoricidal immune response resulting in the killing of said tumor cells.
- 16. A method of killing tumor cells in a mammal, comprising contacting accessory cells, immunocytes, or fibroblasts that are transfected with nucleic acid encoding a superantigen or biologically active polypeptide of a superantigen with the immune system of said mammal,
 - wherein expression of said superantigen or polypeptide by the transfected cells produces a tumoricidal immune response resulting in the killing of said tumor cells.
- 17. The method of claim 15 or 16, wherein the mammal
- 18. The method of claim 15 or 16, wherein the superantigen is selected from the group consisting of a Staphylococcal enterotoxin, a Streptococcal pyrogenic exotoxin, toxic shock syndrome toxin, a mycoplasma antigen, a mycobacteria antigen, a minor lymphocyte stimulating antigen, a heat shock protein, a stress peptide, and a derivative thereof.
- 19. The method of claim 15 or 16, wherein the transfected cells are transfected in vivo.
- 20. The method of claim 15 or 16, wherein the transfected
- 21. The method of claim 20, wherein the transfected cells are tumor cells, and the contacting comprises administering the transfected tumor cells to the mammal.
- 22. The method of claim 15 or 16, wherein the contacting nocytes are expanded by further in vitro culture prior to their 55 comprises administering the transfected cells to the mammal.
 - 23. The method of claim 15 or 16, wherein the contacting
 - (i) incubating the transfected cells ex vivo with an immunocyte population to tumoricidally activate the population, and
 - (ii) administering the activated population to the mammal.
 - 24. The method of claim 23, wherein the immunocyte population being activated comprises T cells.
 - 25. The method of claim 23, wherein the activated immunocytes are expanded by in vitro culture prior to their administration.

62

- 26. The method of claim 25, wherein the in vitro culture includes interleukin 2.
- 27. The method of claim 15 or 16, wherein the superantigen is expressed on the surface of the transfected cells.
- 28. The method of claim 15 or 16, wherein the transfected 5 cells expresses MHC class II molecules.
- 29. A method for increasing antitumor immunity against a tumor in a mammal, comprising contacting tumor cells that are transfected with nucleic acid encoding a superantigen or biologically active polypeptide of a superantigen with the 10 immune system of said mammal,

wherein expression of the superantigen or polypeptide by the transfected cells induces T cell proliferation and increases said antitumor immunity.

30. A method for increasing antitumor immunity against 15 a tumor in a mammal, comprising contacting accessory cells, immunocytes or fibroblasts that are transfected with nucleic acid encoding a superantigen or biologically active polypeptide of a superantigen with the immune system of said mammal, 20

wherein expression of the superantigen or polypeptide by the transfected cells induces T cell proliferation and increases said antitumor immunity.

- 31. The method of claim 29 or 30, wherein the mammal is a human.
- 32. The method of claim 29 or 30, wherein the superantigen is selected from the group consisting of a Staphylococcal enterotoxin, a Streptococcal pyrogenic exotoxin, toxic shock syndrome toxin, a mycoplasma antigen, a mycobacteria antigen, a minor lymphocyte stimulating antigen, a heat shock protein, a stress peptide, and a derivative thereof.
- 33. The method of claim 29 or 30, wherein the tumor cells, accessory cells, immunocytes or fibroblasts are transfected in vivo.
- 34. The method of claim 29 or 30, wherein the tumor cells, accessory cells, immunocytes or fibroblasts are transfected in vitro.
- 35. The method of claim 34, wherein the transfected cells are tumor cells, and the contacting comprises administering the transfected tumor cells to the mammal.

- 36. The method of claim 29 or 30, wherein the contacting comprises administering the transfected cells to the mammal.
- 37. The method of claim 29 or 30, wherein the contacting comprises:
 - (i) incubating the transfected cells ex vivo with an immunocyte population to tumoricidally activate the population, and
 - (ii) administering the activated population to the mammal.
- 38. The method of claim 37, wherein the immunocyte population being activated comprises T cells.
- 39. The method of claim 37, wherein the activated immunocytes are expanded by in vitro culture prior to their administration.
- 40. The method of claim 39, wherein the in vitro culture includes interleukin 2.
- 41. The method of claim 29 or 30, wherein the superantigen is expressed on the surface of the transfected cells.
- 42. The method of claim 29 or 30, wherein the transfected cells express MHC class II molecules.
- 43. A method for treating cancer in a tumor-bearing host, comprising administering a nucleic acid encoding a superantigen to said tumor in vivo to transfect tumor cells, wherein expression of said superantigen induces a tumoricidal immune response, thereby treating said cancer.
- 44. A method of killing tumor cells in a mammal, comprising administering a nucleic acid encoding a superantigen or biologically active polypeptide of a superantigen to said tumor in vivo to transfect tumor cells, wherein expression of the superantigen or polypeptide produces a tumoricidal immune response resulting in the killing of said tumor cells.
- 45. A method for increasing antitumor immunity against a tumor in a tumor-bearing mammal, comprising administering a nucleic acid encoding a superantigen or biologically active polypeptide of a superantigen to said tumor in vivo to transfect tumor cells, wherein expression of the superantigen or polypeptide induces T cell proliferation and increases said antitumor immunity.
- 46. The method of any of claims 43-45 wherein said mammal or host is a human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                x1, x8, x13 and x24 = L, I or v; x3, x25 and x26 = any amino acid (aa) or are absent; x27 = L or v; all other x may be any aa. The peptides can be used to generate serum antibodies (Ab) that bind at least one staphylococcal enterotoxin (SE) or streptococcal endotoxin (SPE). Ab are used: (i) for diagnostic detection of SPEA or SEA, SEB and SED, in usual immunoassays; (ii) to inhibit blastogenesis of human mononuclear cells in presence of these toxins (i.e. to protect against or alleviate toxic shock or autoimmune disease associated with bacterial infections); and (iii) for passive immunisation against effects of the toxins. The peptides generate Ab that are cross-reactive with toxins from a variety of bacteria. The present sequence represents a specifically claimed example of a peptide of the present invention.
                             Claim 4;
                                                                  Peptides useful for syndrome and septic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   staphylococcal enterotoxin or streptococcal exotoxin and both the peptides and antibodies can be used in diagnostic assays to aid in the cidagnosis of disease related to the presence of bacterial toxins. Nucleic acids encoding a peptide of the invention can be used for the production of the peptides for diagnostic reagents, as vaccines and for therapies for pyrogenic exotoxin related diseases. Vectors expressing high levels of the peptides can be used in immunotherapy and immunoprophylaxis when expressed in humans. The antibodies are used for passive immunisation therapy to prevent or increase resistance to toxic shock syndrome or expressed in humans. The antibodies are used for passive immunisation therapy to prevent or increase resistance to toxic shock syndrome or expressed in humans. The antibodies are used for passive immunisation the presence of staphylococcal or streptococcal pyrogenic toxins. The amino acid sequences of the peptides are sufficiently common that they can be used for eliciting antibodies which are cross reactive with toxins derived from various bacteria. Sequences AAY97838-y978343 represent the synthetic peptides based on consensus consensus regions 1 and 2 of Staphylococcus aureus and Group A streptococcal pyrogenic toxins.

These peptides can be administered to a mammal to raise serum antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                      AAY72176 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               share similar biological activities. They stimulate CD4+, CD8+ and gamma-delta+ T-cells by binding the beta-chain variable region (V-beta) elements on the lateral face of the T-cell receptor (TCR) while simultaneously binding the lateral face of the class II major histocompatibility complex (MHC) of antigen presenting cells. This causes aberrant proliferation of T-cells, which stimulates other components of the immune system, causing injury to the host. The peptides are used to prevent, treat or protect against toxic shock and septic shock resulting from bacterial infections in mammals, particularly humans. The peptides are used for inducing serum antibodies that bind at least one
                                                                                                                                                                                    24-APR-2001
                                                                                                                                                                                                                                                               AAY72176;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        X9-X10-X11-X12-X13-D-X14-X15-X16-R-X17-X18-X27-X19-X20-X21-X22-X23-X24-Y (AAYS97864), where: X1, X8, X13 and X24 are each independently selected from L, I and V; X2,X4, X5, X6, X7, X9, X10, X11, X12, X14, X15, X16, X17, X18, X19, X20, X21, X22 and X23 are each independently selected from the group consisting of any amino acid; the group consisting of any amino acid; X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from the group consisting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             pyrogenic toxins. The pyrogenic exotoxins of Group A streptococci and the enterotoxins of Staphylococcus aureus (which are also pyrogenic exotoxins) constitute a family of structurally related toxins which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               X27 is either L or Y.

The invention also relates to serum antibodies induced by the peptides which provide protection against, or reduce the severity of toxic shocl and septic shock caused by the staphylococcal and streptococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (regions 1 and 2) or computations are streptococcal pyrogenic toxins: Consensus region 1a (a preferred consensus region 1) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N (AAV47863) and consensus region 2a (a preferred consensus region 2) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N (AAV47863) and consensus region 2a (a preferred consensus region 2) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N (AAV47863) and consensus region 2a (a preferred consensus region 2) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N (AAV47863) and consensus region 2a (a preferred consensus region 2) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N (AAV47863) and consensus region 2a (a preferred consensus region 2) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N (AAV47863) and consensus region 2a (a preferred consensus region 2) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N (AAV47863) and consensus region 2a (a preferred consensus region 2a (a prefe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             x3, x5 and X26 are equi inversion acid; of any amino acid and of no amino acid;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for protection against or amelioration

The peptide, nucleic acid encoding the peptide and antibody (Ab) produced against the peptide are useful for inhibiting blastogenesis of mononuclear cells (eg. T cells) in the presence of human immunodeficiency virus (HIV), inhibiting HIV replication and protecting a mammal against the deleterious effects of HIV. The peptide is also used to ameliorate the effects of autoimmune diseases associated with the presence of HIV. The Ab is used for passively immunising a mammal against the deleterious effects of HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Providing protection against, and reducing the severity of, human immunodeficiency virus infections and associated deleterious effects, using peptides from homologous sequences of staphylococcal and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present invention describes peptides having consensus sequences #1 CC or #2, optionally as part of a larger molecule of size at least 6-8 kD. CC Where consensus sequence #1 and #2 are: X25X26YGGXITXZX3X4X5N #1, CC KX6X7X8X9X10X11X1ZX13DX14X15X16RX17X18X27X19X20X21X2ZX3X24Y #2, where CC X1, X8, X13 and X24 = L, I or V; X3, X25 and X26 = any amino acid (aa) CC or are absent; X27 = L or Y; all other X may be any aa. The peptides CC can be used to generate serum antibodies (Ab) that bind at least one CC staphylococcal enterotoxin (SE) or streptococcal endotoxin (SPE). Ab CC are used: (i) for diagnostic detection of SPEA or SEA, SEB and SED, in CC usual immunoassays; (ii) to inhibit blastogenesis of human mononuclear CC cells in presence of these toxins (i.e. to protect against or alleviate CC and (iii) for passive immunisation against effects of the toxins. The CC peptides generate Ab that are cross-reactive with bacterial infections); CC and (iii) for passive immunisation against effects of the toxins. The CC peptides generate Ab that are cross-reactive with toxins from a variety CC of bacteria. The present sequence represents a specifically claimed CC example of a peptide of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                               which provide protection against, or reduce the severity of toxic shock caused by the staphylococcal and streptococcal and septic shock caused by the staphylococcal and streptococcal and control of toxic shock caused by the staphylococcal and streptococcal and the project toxins. The pyrogenic exotoxins of Group A streptococcal and the enterotoxins of Staphylococcus aureus (which are also pyrogenic exotoxins) constitute a family of structurally related toxins which constitutes on the lateral face of the T-cell receptor (TCR) while constitutes on the lateral face of the T-cell receptor (TCR) while constituted and subtility complex (MHC) of antigen presenting cells. This causes aberrant proliferation of T-cells, which stimulates other components of the immune system, causing injury to the host. The peptides are used to prevent, treat or protect against toxic shock and septic shock resulting collar interactions in mammals, particularly humans. The peptides for diagnostic shock and septic shock resulting collar interaction of streptococcal exotoxin and both the constant of diagnostic respective constant and both the collar phylococcal exotoxin related to the presence of bacterial toxins. Nucleic acids encoding a peptide of the invention can be used for the production of the peptides for diagnostic respects. Vectors expressing high levels of the peptides can be used in immunotherapy and immunoprophylaxis when the prosessed in humans. The antibodies are used for passive immunisation can be used for entitient of the peptides are softened to the special toxins. The constitution of the peptides for diagnostic respectate to toxic shock syndrome or septic shock syndrome or consensus consensus regions 1 and 2 of the personal diagnostic respectations 1 and 2 of the production sased on consensus consensus regions 1 and 2 of the syndrome of the syndrome of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel peptides (AAY97838-Y97843) comprising a consensus amino acid sequence derived from two conserved regions (regions 1 and 2) of Staphylococcus aureus enterotoxins and streptococcal pyrogenic toxins. Consensus region 1a (a preferred consensus region 1) has the sequence x25-x26-y-G-G-X1-T-X2-X3-X4-X5-N (AAY97863) and consensus region 2a (a preferred consensus region 2) has the sequence x76-x7-X8-X1-X1-X12-X13-D-X14-X15-X16-R-X17-X18-X27-X19-X20-X21-X22-X23-X24-y (AAY97864), where: X1, X8, X13 and X24 are each independently selected from L, I and V; X2,X4, X5, X6, X7, X9, X10, X11, X12, X14, X15, X16, X17, X18, X11, X12, X14, X15, X16, X17, X18, X13, X19, X21, X22 and X23 are each independently selected from the group consisting of any amino acid.

CC X1, X18, X19, X20, X21, X22 and X23 are each independently selected from the group consisting of any amino acid.

CC X3, X5 and X26 are each independently selected from the group consisting of any amino acid and of no amino acid.

CC The invention also relates to serum antibodies induced by the peptides which novide and referring arginst or reduce the security of the peptides.
                                                                                                           Matches
                                                                                                                                                                                                                                                                                                             synthetic peptides based on consensus consensus regions 1 and 2 of Staphylococcus aureus and Group A streptococcal pyrogenic toxins. These peptides can be administered to a mammal to raise serum antibodies
                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptides useful for preventing syndrome and septic shock from infections -

The peptide, nucleic acid encoding the peptide and antibody (Ab) produced against the peptide are useful for inhibiting blastogenesis of mononuclear cells (eg. T cells) in the presence of human immunodeficiency virus (HIV), inhibiting HIV replication and protecting a mammal against the deleterious effects of HIV. The peptide is also used to ameliorate the effects of autoimmune diseases associated with the presence of HIV. The Ab is used for passively immunising a mammal against the deleterious effects of HIV.
                                                                                     Peptide #5 for reducing symptoms of toxic shock syndrome
                                                                                                                                                                                                                    AAW72426;
                                                                                                                                                        22-DEC-1998
                                                                                                                                                                                                                                                                             AAW72426 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is peptide #6344, a cross-linked polymer derived from the homologous sequences of staphylococcal enterotoxin and

                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              X1, X8, X13 and X24 = L, I or V; X3, X25 and X26 = any amino acid (aa) or are absent; X27 = L or Y; all other X may be any aa. The peptides can be used to generate serum antibodies (Ab) that bind at least one staphylococcal enterotoxin (SE) or streptococcal endotoxin (SPE). Ab are used: (1) for diagnostic detection of SPEA or SEA, SEB and SED, in usual immunoassays; (11) to inhibit blastogenesis of human mononuclear cells in presence of these toxins (i.e. to protect against or alleviate toxic shock or autoimmune disease associated with bacterial infections); and (iii) for passive immunisation against effects of the toxins. The peptides generate Ab that are cross-reactive with toxins from a variety of bacteria. The present sequence represents a specifically claimed example of a near the oresent sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes peptides having consensus sequences or #2, optionally as part of a larger molecule of size at least 6-8 where consensus sequence #1 and #2 are: x25x26Y63X1TX2X3X4X5N #1, KX6X7X8X9X10X11X12X13DX14X15X16RX17X18X27X19X20X21X22X23X24Y #2, whe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New peptides that generate antibodies against staphylococcal and streptococcal toxins - used to diagnose, treat or prevent toxic shock and autoimmune diseases

CC exotoxins) constitute a family of structurally related toxins which CC share similar biological activities. They stimulate CD4+, CD8+ and CC gamma-delta+ T-cells by binding the beta-chain variable region (V-beta) CC elements on the lateral face of the T-cell receptor (TCR) while CC simultaneously binding the lateral face of the class II major CC histocompatibility complex (MHC) of antigen presenting cells. This causes CC aberrant proliferation of T-cells, which stimulates other components of the immune system, causing injury to the host. The peptides are used to prevent, treat or protect against toxic shock and septic shock resulting CC from bacterial infections in mammals, particularly humans. The peptides are used for inducing serum antibodies that bind at least one components of the peptides and antibodies can be used in diagnostic assays to aid in the CC diagnosis of disease related to the presence of bacterial toxins. Nucleic acids encoding a peptide of the invention can be used for the production of the peptides for diagnostic reagents, as vaccines and for therapies for pyrogenic exotoxin related diseases. Vectors expressing high levels cof the peptides can be used in immunotherapy and immunoprophylaxis when ceptic shock and to ameliorate the effects of conditions associated with the presence of staphylococcal or streptococcal pyrogenic toxins. The components of the peptides are used for passive immunisation can be used from various bacteria. Sequences AAV97838-Y978343 represent the they component that they can be used from various bacteria. Sequences AAV97838-Y978343 represent the contributions of the prosessing of the peptides which are cross-reactive with toxins contensus regions 1 and 2 of the sequences of the peptides which are cross-reactive with toxins contensus regions 1 and 2 of the sequences of the peptides which are cross-reactive with toxins contensus regions 1 and 2 of the sequences of the peptides which are cross-reactive with toxins contensus regions 1 and 2 of the provence of the conten
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel peptides (AAY97838-Y97843) comprising a consensus amino acid sequence derived from two conserved regions (regions 1 and 2) of Staphyllococcal streptococcal pyrogenic toxins. Consensus region 1a (a preferred consensus region 1) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and septic shock caused by the staphylococcal and streptococcal pyrogenic toxins. The pyrogenic exotoxins of Group A streptococci and the enterotoxins of Staphylococcus aureus (which are also pyrogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (AAY97864), where: X1, X8, X13 and X24 are each independently selected from L, I and V; X2, X4, X5, X6, X7, X9, X10, X11, X12, X14, X15, X16, X17, X18, X19, X20, X21, X22 and X23 are each independently selected from the group consisting of any amino acid; X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from the group consisting X3, X5 and X26 are each independently selected from X4.
                                                                                       synthetic peptides based on consensus consensus regions 1 and 2 of Staphylococcus aureus and Group A streptococcal pyrogenic toxins. These peptides can be administered to a mammal to raise serum antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 x27 is either L or Y.

The invention also relates to serum antibodies induced by the peptides

                                                                                                                                                                                                                                                                                                                                     The peptide, nucleic acid encoding the peptide and antibody (Ab) produced against the peptide are useful for inhibiting blastogenesis of mononuclear cells (eg. T cells) in the presence of human immunodeficiency virus (HIV), inhibiting HIV replication and protecting a mammal against the deleterious effects of HIV. The peptide is also used to ameliorate the effects of autoimmune diseases associated with the presence of HIV. The Ab is used for passively immunising a mammal against the deleterious
                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                The present invention describes peptides having consensus sequences #1 or #2, optionally as part of a larger molecule of size at least 6-8 kD. Where consensus sequence #1 and #2 are: x25x26YGGXITX2X3X44X5N #1, KX6X7X8X9X10XIIX12X13DX14X15X16RX17X18X27X19X20X2IX22X2X24Y #2, where x1, x8, x13 and x24 = L, I or V; x3, x25 and x26 = any amino acid (aa) or are absent; x27 = L or Y; all other x may be any aa. The peptides can be used to generate serum antibodies (Ab) that bind at least one staphylococcal enterotoxin (SB) or streptococcal endotoxin (SPB). Ab are used: (1) for diagnostic detection of SPEA or SEA, SEB and SED, in usual immunoassays; (ii) to inhibit bastogeness of human mononuclear cells in presence of these toxins (i.e. to protect against or alleviate toxic shock or autoimmune disease associated with bacterial infections); and (iii) for passive immunisation against effects of the toxins.                                                                                                                                                                                                                                                                                                       peptides generate Ab that are cross-reactive with toxins from a variety of bacteria. The present sequence represents a specifically claimed example of a peptide of the present invention.

CC and septic shock caused by the staphylococcal and streptococcal CC pyrogenic toxins. The pyrogenic exotoxins of Group A streptococcal CC exotoxins) constitute a family of structurally related toxins which CC exotoxins) constitute a family of structurally related toxins which CC exotoxins) constitute a family of structurally related toxins which CC share similar biological activities. They stimulate CD4+, CD8+ and CC gamma-delta+ T-cells by binding the beta-chain variable region (V-beta) CC elements on the lateral face of the T-cell receptor (TCR) while CC simultaneously binding the lateral face of the class II major the instocompatibility complex (MHC) of antigen presenting cells. This causes aberrant proliferation of T-cells, which stimulates other components of the immune system, causing injury to the host. The peptides are used to prevent, treat or protect against toxic shock and septic shock resulting CC from bacterial infections in mammals, particularly humans. The peptides can be used for inducing serum antibodies that bind at least one staphylococcal enterotoxin or streptococcal exotoxin and both the CC peptides and antibodies can be used in diagnostic assays to aid in the CC diagnosis of disease related to the presence of bacterial toxins. Nucleic acids encoding a peptide of the invention can be used for the production of the peptides for diagnostic reagents, as vaccines and for therapies CC for pyrogenic exotoxin related diseases. Vectors expressing high levels of the peptides can be used in immunotherapy and immunoprophylaxis when expressed in humans. The antibodies are used for passive immunisation therapoles for the peptides can be used in the conditions associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of any amino acid and of no amino acid; X27 is either L or Y.

The invention also relates to serum antibodies induced by the peptides which provide protection against, or reduce the severity of toxic shoc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (AAY97863) and consensus region 2a (a preferred consensus region 2) has the sequence K-X6-X7-X8-
X9-X10-X11-X13-D-X14-X15-X16-R-X17-X18-X27-X19-X20-X21-X22-X23-X24-Y
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel peptides (AAY97838-Y97843) comprising a consensus amino acid sequence derived from two conserved regions (regions 1 and 2) of Staphylococcus aureus enterotoxins and streptococcal pyrogenic toxins. Consensus region 1a (a preferred consensus region 1) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N (AAY97863) and consensus region 2a (a preferred consensus region 2) has
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 4; Page 88; 115pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  amino acid sequences of the peptides are sufficiently common that they can be used for eliciting antibodies which are cross-reactive with toxins derived from various bacteria. Sequences ANY97838-Y978343 represent the synthetic peptides based on consensus consensus regions 1 and 2 of Staphylococcus aureus and Group A streptococcal pyrogenic toxins. These peptides can be administered to a mammal to raise serum antibodies
                                            The peptide, nucleic acid encoding the peptide and antibody (Ab) product against the peptide are useful for inhibiting blastogenesis of mononuclear cells (eq. T cells) in the presence of human immunodeficien wirus (HIV), inhibiting HIV replication and protecting a mammal against the deleterious effects of HIV. The peptide is also used to ameliorate the effects of autoimmune diseases associated with the presence of HIV. The Ab is used for passively immunising a mammal against the deleterious that the peptide is also used to ameliorate the effects of autoimmune diseases associated with the presence of HIV.
                                                                                                                                                                                                                                 Claim
                                                                                                                                                                                                                                                                  providing protection against, and reducing the severity of, human immunodeficiency virus infections and associated deleterious effections peptides from homologous sequences of staphylococcal and streptococcal toxins.
                                                                                                                                                                                                                                                                                                                                                   WPI;

       The invention also relates to serum antibodies induced by the peptides which provide protection against, or reduce the severity of toxic shock and septic shock caused by the staphylococcal and streptococcal pyrogenic toxins. The pyrogenic exotoxins of Group A streptococci and the enterotoxins of Staphylococcus aureus (which are also pyrogenic exotoxins) constitute a family of structurally related toxins which share similar biological activities. They stimulate CD4+, CD8+ and gamma-delta+ T-cells by binding the beta-chain variable region (V-beta) elements on the lateral face of the T-cell receptor (TCR) while simultaneously binding the lateral face of the class II major histocompatibility complex (MHC) of antigen presenting cells. This causes histocompatibility complex (MHC) of antigen presenting cells.
                                                                                                                                                                                                                (AAY97864), where: X1, X8, X13 and X24 are each independently selected from L, I and V; X2,X4, X5, X6, X7, X9, X10, X11, X12, X14, X15, X16, X17, X18, X19, X20, X21, X22 and X23 are each independently selected from the group consisting of any amino acid; X3, X5 and X26 are each independently selected from the group consisting of any amino acid and of no amino acid; X27 is either L or Y.
                                                                                                                                                                                                                                                                                                                                             the sequence K-X6-X7-X8-
X9-X10-X11-X12-X13-D-X14-X15-X16-R-X17-X18-X27-X19-X20-X21-X22-X23-X24-Y
                                                                                                                                                                                                                                                                                                                                                                                            (regions 1 and 2) of Staphylococcus aureus enterotoxins and streptococcal pyrogenic toxins. Consensus region 1a (a preferred consensus region 1) has the sequence x25 x26 Y-G-G-X1-Y-X2-X3-X4-X5-N
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel peptides (AAY97838-Y97843) comprising

The peptides are used to prevent, treat or protect against toxic shock and septic shock resulting from bacterial infections in mammals, particularly humans. The peptides are used for inducing serum antibodies that bind at least one staphylococcal enterotoxin or streptococcal exotoxin and both the peptides and antibodies can be used not diagnostic assays to aid in the diagnosis of disease related to the presence of bacterial toxins. Nucleic acids encoding a peptide of the invention can be used for the production of the peptides for diagnostic reagents, as vaccines and for theraples for the peptides can be used in immunotherapy and immunoprophylaxis when expressed in humans. The antibodies are used for passive immunisation therapy are the production of the peptides can be used in immunotherapy and immunoprophylaxis when expressed in humans. The antibodies are used for passive immunisation therapy are the production of the peptides can be used in immunotherapy and immunoprophylaxis when expressed in humans. The antibodies are used for passive immunisation that the peptides can be used in the peptides can be used in immunotherapy and immunoprophylaxis when the peptides can be used in immunotherapy and immunisation that the peptides can be used in the peptides can be used to passive immunisation that the peptides can be used to perform the perform the peptides can be used to perform the peptides can be us

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cc pyrogenic toxins. The pyrogenic exotoxins of Group A Streptococci and ct the enterotoxins of Staphylococcus sureus (which are also pyrogenic exotoxins) constitute a family of structurally related toxins which cc share similar biological activities. They stimulate CD4+, CD8+ and gamma-delta+ T-cells by binding the beta-chain variable region (V-beta) celements on the lateral face of the T-cell receptor (TCR) while CC simultaneously binding the lateral face of the class II major class are used to histocompatibility complex (MHC) of antigen presenting cells. This causes aberrant proliferation of T-cells, which stimulates other components of the immune system, causing injury to the bost. The peptides are used to prevent, treat or protect against toxic shock and septic shock resulting cf from bacterial infections in mammals, particularly humans. The peptides are used for inducing serum antibodies that bind at least one staphylococcal enterotoxin or streptococcal exotoxin and both the peptides and antibodies can be used in diagnostic assays to aid in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match 93...

Nucleic acids encoding a peptide of the invention can be used for the production of the peptides for diagnostic reagents, as vaccines and for therapies for pyrogenic exotoxin related diseases. Vectors expressing high levels of the peptides can be used in immunotherapy and immunoprophylaxis when expressed in humans. The antibodies are used for passive immunisation therapy to prevent or increase resistance to toxic shock syndrome or septic shock and to ameliorate the effects of conditions associated with the presence of staphylococcal or streptococcal pyrogenic toxins. The amino acid sequences of the peptides are sufficiently common that they can be used for eliciting antibodies which are cross-reactive with toxins derived from various bacteria. Sequences AAY97844-Y97852 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (AAY97864), where: x1, x8, x13 and x24 are each independently selected from L, I and Y; x2,x4, x5, x6, x7, x9, x10, x11, x12, x14, x15, x16, x17, x18, x19, x20, x21, x22 and x23 are each independently selected from the group consisting of any amino acid; x3, x5 and x26 are each independently selected from the group consisting of any amino acid and of no amino acid;
                                                                                                                                                                                                               Mononuclear cell; blastogenesis; inhibitor; HIV; replicatistaphylococcal enterotoxin; human immunodeficiency virus; autoimmune disease; immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         which provide protection against, or reduce the severity of toxic shock and septic shock caused by the staphylococcal and streptococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               x27 is either L or Y.
The invention also relates to serum antibodies induced by the peptides
which provide protection against, or reduce the severity of toxic shoc
